

1 Optik Allgemein

Wellenlänge  $\lambda = \frac{c_0}{f n} = \frac{\lambda_0}{n} \quad [m]$

Feldwellenwiderstand  $Z_F = \frac{|E|}{|H|} = \sqrt{\frac{\mu_0 \mu_r}{\epsilon_0 \epsilon_r}} = Z_0 \sqrt{\frac{\mu_r}{\epsilon_r}} \quad [\Omega]$

Im Medium  $Z_F = \frac{Z_0}{n}$

Poynting-Vektor  $\vec{S} = \vec{E} \times \vec{H}, |\vec{S}| = \frac{1}{2} |\vec{E}| |\vec{H}| = \frac{|\vec{E}|^2}{2 Z_F} = I \quad [\frac{W}{m^2}]$

Leistung  $P = A |\vec{S}| \quad [W]$

Photonenenergie 
$$W_{Phot} = h f = h \frac{c_0}{\lambda_0} \quad [W]$$

Photonenflussdichte  $\Phi_{Phot} = \frac{N_{Phot}}{dt dA}$
